It is part of the Autodesk family of software applications. The first version of AutoCAD, released in December 1982, was primarily a desktop app running on microcomputers with internal graphics controllers. It was initially used to create drawings. It was not designed to operate over a network, and was not available as a web application. Although initially designed as a desktop app, AutoCAD is now available on mobile devices. AutoCAD and all other Autodesk software are part of the Autodesk software platform. Advantages of AutoCAD: See the summary table below for the advantages and disadvantages of AutoCAD. Features AutoCAD is primarily a 2D drafting program. CAD features may be applied to the drawing before exporting it to other CAD systems. Features, functions and capabilities differ slightly from AutoCAD version to AutoCAD version. Autodesk Exchange Apps AutoCAD Exchange (formerly AutoCAD Exchange Apps) is a collection of AutoCAD-based exchange plugins developed by Autodesk. The plugin software is licensed under the AutoCAD User Subscription Terms and Conditions.

AutoCAD Exchange plugins must be purchased separately from AutoCAD. AutoCAD Exchange provides the following functionality: Microsoft Access File export Build based drawing creation Drawing folder functions Drawings can be accessed in this location when using the Windows search function Overlay edit functions and commands With the addition of the AutoCAD Exchange Apps and the ability to create drawings in Revit, AutoCAD creates a third and arguably more powerful platform for engineering and architectural design than any other CAD system. Field of the Invention This invention relates to a dosing device for dispensing metered amounts of at least one reactive component, in particular a reactive material, to a cleaning agent at a controlled rate. 2. Description of the Related Art In the field of laboratory work, in particular in automatic analytical work stations, there is often a need to dispense one or more reagents into the reaction vessel in a precisely metered and controlled manner. EP-A-955,085 discloses a dosing device for a liquid, wherein the dosing device is constructed as a hollow cylinder and a piston is mounted therein, this piston forming part of a measuring device. This measuring device has a measuring chamber, which communicates via an opening with a dosing chamber of the hollow cylinder. The dosing chamber forms a metering chamber, into which the measuring chamber communicates via a filling opening. A dosing cap is associated with the cylinder, this cap being intended to cooperate with the piston in such a manner that the piston seals the opening in the wall of the hollow cylinder when the piston has been advanced and seals the filling opening in the wall of the hollow cylinder when the piston has been retracted. Thus, the filling opening is closed when the piston is in the position to close the opening in the wall of the hollow cylinder, and the measuring chamber is closed when the piston is in the position to close the opening in the wall of the hollow cylinder.
