The only caveat I have about any software application is that if you must use it, you should know your own limitations. My #1 takeaway from studying computer graphics for the past 17 years is that it is a "people business" - not a "stuff" business. In other words, software is merely tools, and like most tools they can be used to achieve a specific goal, or to make your job easier, or more productive. If you don't know what your limitations are, you won't be able to choose the right tools for your job. As a general note, I have a basic level of understanding and working knowledge of AutoCAD from having read a lot about the software over the years and playing with it. I also understand and have taken college courses in engineering and computer graphics, and am familiar with other CAD applications such as AutoCAD LT, AutoCAD 3D, and various plug-in modules like DWG2PDF and DWG2DXF. Here are my "101" AutoCAD tips & tricks that have worked for me, which I share for your benefit. You may not like these tips and tricks because you have different preferences or because they do not apply to your workflow, but hopefully they will save you some time and help you achieve what you need in AutoCAD. Before we get to those "101 tips," I want to tell you about my Autodesk Education program - if you are like me, the AutoCAD tips you have seen and tried to use online have not worked for you. I have the same feelings about Autodesk Education, and I am just as frustrated as you. I have learned a lot of AutoCAD through this program over the years, and I think you should take the time to learn it in-person if you can. The main AutoCAD Education program is held in San Francisco every month, which is something I wish I could do. However, due to the nature of the field, it is very difficult to get to any specific location in any specific time. The next best thing is to come to the San Francisco AutoCAD Education class. In fact, I started going to these classes almost a decade ago, and I learned AutoCAD through it. Since then, I have been in each and every class, and I know all the participants, and I have gotten to know the staff. The staff is amazing, and they are always willing to help you, even
