The commercials prominently feature a Surface Pro 4 and a Surface Book, but they're sandwiched between older Surface 3 commercials. Microsoft introduced both products just yesterday, so the ads aren't fully complete. But we're already getting a sense of the company's strategy. Microsoft is positioning Surface Pro 4 and Surface Book as a pair. The commercials feature real people using their devices as their primary devices, with the Surface Pro 4 and Surface Book functioning as the main device, the companion that users rely on when they aren't using their laptop or desktop PC. The commercials show users doing basic tasks, such as surfing the web, playing a video game, writing in a word processor, drawing in a digital pen-enabled application, and so on. The commercials don't show users using the Surface Pro 4 or Surface Book with a mouse, which is the way most people would use these devices. Microsoft notes that "in real life, we don't all just stand up in front of a big screen and type with one hand." The commercials are slightly irritating for what they reveal about Microsoft's strategy. We know that Windows 10 and Surface are evolving in new directions, a1d647c40b
