CleanIt is a lightweight Windows application whose purpose is to help you clean all temporary files and folders from your TEMP directory using automatic deletion actions. Cleaning options When you run it for the first time, the program asks you to confirm the location of the temporary items. This is the only configuration parameter that you need to tweak because the utility takes care of the rest of the job automatically. CleanIt is able to automatically scan and delete the detected temporary files. During a scan process it shows information about the path of the currently processed temporary file, total number of identified items, as well as total file size. At the end of the task the tool automatically closes itself. Another important aspect worth being mentioned is that CleanIt automatically runs at Windows startup and cleans the temporary files at every boot in order to make sure your drive space is not wasted on unnecessary files. A cleaning task is carried out very quickly. CleanIt is not a resource hog so you do not have to worry that it eats up CPU and memory resources. Aside from that, you can manually open the program anytime and activate a cleaning session but it is not actually recommended to delete temporary files dated today because some software utilities may rely on them in order to function properly. On the downside, you cannot filter the temporary files by date, as CleanIt processes all of them. Bottom line All things considered, CleanIt provides nothing more than a simplistic approach for helping you get rid of temporary items from your computer that may eat up a lot of space. On the downside, the application hasn't been updated for a long time so you can make use of its capabilities especially on older operating systems, like Windows XP, Vista and 7. Cleansoft Windows System Optimizer is an all-in-one utility that helps you optimize your Windows system for faster, smoother performance and increased computing speed. While it does that, it also reduces your system's performance and stability risk while it's at it. It will save you time and effort in the long run. ## What's New In CleanIt?

If you have a lot of temporary files on your computer and/or a hard drive that is running low on space, CleanIt is an application that you want to consider using. It is a small, yet handy utility that can help you eliminate all unnecessary temporary files on your computer. However, keep in mind that CleanIt has not been updated for a very long time, and is available only on older versions of Windows operating system. The program is not able to help you with cleaning temporary files that you may have generated during online activities. As for its functionality, CleanIt lets you set up a cleaning task that will automatically delete all temporary files that have been identified during a scan of the temporary directory. You can also choose to be notified when the cleaning session is completed. In addition, the utility has a command line option that lets you run a quick scan. To launch a cleaning task, simply open CleanIt and use the Configuration tool to indicate the location of the temporary items. The default temporary items cleaning task is enabled by default so you do not need to tweak the settings manually. The program will keep running in the background and scan all of your temporary files at every boot. That way, you can free up lots of space and not have to worry about temporary items. Apart from that, you can configure the program manually to select one of the following cleaning options: Automatic: CleanIt will scan for all temporary files on your hard drive and delete them automatically. You can optionally be notified at the end of the process. Notify: This cleaning option lets you be notified when the cleaning process is completed. CleanIt will automatically run a scan and delete all temporary files on your system. Manual: CleanIt will scan for all temporary files on your hard drive manually. You can optionally be notified at the end of the process. This application is very simple to use. Just open it up, specify the location of the temporary files, and click the Set Up button. It will then scan for all temporary files and delete them when it detects them. The program is free, and doesn't need a registration key. - Update History Keywords: cleanit program 1.
