option that tends to work the best for most people is either Office 2016 Home, or Office 365 Home. If you have a Microsoft account, you can choose to install the software on a PC, laptop or tablet, and you can even download it straight to your smartphone and tablet. They're a bit less expensive than Office 365, but the Microsoft Signature editions include more advanced features. They're less than what you can expect from Microsoft Office on the Surface, but they cover a lot of the basics, plus a few advanced features. \* Free Clipboard Windows 10 has a handy feature called the clipboard that instantly copies any info that you copied earlier, directly into other apps, if you are using the software on a Windows 10-powered device. But if you are using Office 2016, it won't work. So, if you want to copy something from, say, Microsoft Word, to the clipboard, using Word on your Surface will work fine. But if you use Word on the desktop, you won't be able to copy from any other application, like Excel, directly into Word. There's a reason why Office 2016 and Surface Pro 4 didn't come with the clipboard as part of the software, but the clipboard still does work, since your mouse will always have the same functions as a mouse pointer. \* SkyDrive file compatibility If you are using a Surface Pro 4, it also has a SkyDrive-compatible cloud-based storage system, Microsoft OneDrive, but it's not always reliable. OneDrive is lacking several features that make it a bad choice for desktop systems. But on the Surface, it seems to be pretty okay, especially since it's free, and works in many different ways. You can share folders and files, as well as work as a file server, or your own image gallery system. It comes with a lot of apps for all kinds of different purposes, including online video, music, and photo storage, as well as photo editing software, plus you can get software to make your own movies from anything you have on your device. Plus, if you don't have a choice, you can use OneDrive to look for your most-used files. \* Open Office, or LibreOffice, support If you have Office 2016, it does come with Open Office, which has a few features missing, 09e8f5149f
