Examples of such motor vehicle steering systems are the rack and pinion steering systems that typically include a hollow or tubular steering column in which a steering shaft is rotatably disposed. The rotational movement of the steering shaft is translated into linear movement of a steering member that is attached to the rear of the steering column. The linear movement of the steering member is in turn translated into corresponding movement of the vehicle steering wheel. Conventional steering systems such as those discussed above are typically referred to as single column designs because they provide a single path for movement of the steering wheel. It is understood that in a dual column design, the steering wheel can be moved in two directions, thereby allowing the operator to move the steering wheel in two different directions in order to steer the vehicle. It is also understood that when a dual column design is utilized, it is known as a convertible design. In such a design, the steering wheel is essentially contained in a rigid tube that is attached to a vehicle column. Convertible designs, including the steering column, provide increased vehicle safety by limiting the overall movement of the steering wheel, thereby reducing the likelihood of the operator becoming pinned or trapped in the steering wheel. The convertible design further enhances vehicle safety by reducing the likelihood that an accident will result in a force being applied to the steering wheel. Convertible designs provide other advantages. For example, because the steering column is contained within a rigid tube, the convertible design may provide improved weight distribution in the vehicle. Additionally, convertible designs provide increased rearward visibility for vehicle operators. Such a convertible design also improves vehicle handling, because, for example, a significant amount of weight of the vehicle is attached to the

steerable wheels. Conventional convertible designs, however, do not provide a smooth and comfortable ride for the operator. This is due, at least in part, to the fact that, as noted above, the vehicle steering wheel is not typically attached to the steering column. Because the steering wheel moves

SpiCALCI is a Capacitor Performance Analysis Software which can be used to analyze the best capacitors and compare a list of capacitors with each other. The list of capacitors can be displayed in a table, or with a graph as in the image below. Keymacro is a Capacitor Analyzer application that can be used to analyze the capacitors under the scope. It can be used to read all the data of the capacitor and show you the graph. KEYMACRO Description: Capacitor Analyzer is a Capacitor Analyzer tool that can be used to analyze the data of the capacitor under the scope. This tool has many options to check and view the data of the capacitor. You can view all the data of the capacitor, or check the capacitor test results. Capacitor is the classic capacitor from Anton Schiedler. When the capacitance of a capacitor changes, the applied voltage will drop down accordingly. But at the same time the applied power will increase. This could be used to calculate the power consumption when the capacitance changes. Capacitor is the classic capacitor from Anton Schiedler. The key commands can be used to change the filters in the specific module. The parameters for the filters can be configured from the menus on the left side of the window. 09/10/2012 Spiderman Spiderman has a set of rules. You see them when you get married. You see them when you retire. It's a set of guidelines that you live by. Spiderman is always looking out for number one. Always doing what's best for his clients. Always looking out for the woman he loves. Always trying to make his clients happy. He's the man for the job. He makes a difference. When you ask Spiderman to come to your house and fix your sump pump, he doesn't think about the job. He doesn't think about how much it will cost you. He just comes because he loves you. And your house. And your sump pump. It's pretty cool to have a Spiderman in your house, don't you think? 12/09/2012 SpiCELEcTrix SpiCELEcTrix is an engineering tool that calculates performance characteristics and parameters for Switch Mode Power Supply capacitors. The application displays graphs that show the technical performances and capabilities of each capacitor tested. KEYMACRO Description: The key commands can be used to change the filters in the specific module.
