The first version of AutoCAD was called AutoPLOT. AutoPLOT 4.5, released in May 1986, introduced the command line and scripting language AutoLISP, which had been created by Art Reeves. The main objective of AutoPLOT was to automate the process of drawing in AutoCAD. In April 1987, New York-based Metric Graphics and New Haven-based Metric Systems merged to form Metric Software. In 1989, the first version of AutoCAD, based on AutoPLOT, was released. In early 1989, Metric Systems, based in nearby West Haven, Connecticut, bought AutoPLOT and incorporated it into AutoCAD. In the same year, Metric Systems released the first version of AutoCAD, then named AutoCAD 1986. Version 1 of AutoCAD (or AutoCAD 1986) did not allow users to freely scale objects. Its use of bitmap graphics and the entire concept of each layer of a drawing being visible or not were new. When it was released, there was only one command line program to modify objects: the ALOC (Analysis of Locations and Components) command. (AutoCAD 1987 brought the first Graphical Methods function, allowing users to draw freehand lines, arcs and polylines without moving from the command line.)
