Technical Architecture Automation Unified API The Unified API is a C++ class library for defining extensions to AutoCAD's operation. It consists of three parts: the Framework, the Document Management and the Component Kit. The Framework is based on the UnitContainer and UnitDefinition classes. This allows extensions to be made to existing units and parameters, and to create new units and parameters. The Document Management allows customizing document creation by users, and is based on the DocumentContent class. The Component Kit provides a mechanism for defining objects that can be used throughout an AutoCAD drawing. The Component Kit is based on the Component object and provides a framework for creating custom components, and for providing them to other applications. Visual LISP Visual LISP, or Visual LISP for AutoCAD, was introduced with AutoCAD 2008 and is a programming language specially designed to program AutoCAD. It is a dynamic, scriptable language and was designed to perform drawing and data management functions. The language can be downloaded as a Windows or a Macintosh application, with installation of Visual LISP software taking up to 1.2 GB of space. Visual LISP provides classes for drawing functions, file access, coordinate system management, events and interfaces. These classes are compiled into native AutoCAD commands, allowing them to be used in the program without being written in AutoCAD's native language. Unlike other programming languages, the visual LISP language has no need for a separate interpreter as AutoCAD is already capable of interpreting Visual LISP commands. AutoLISP AutoLISP is a similar language, but does not require the installation of any software. Instead, it is an extension of AutoCAD's native LISP-like commands. For example, the command LIUcreateObject (the equivalent of creating a component) or LIULineToPath (the equivalent of creating a line between two points) are AutoLISP-enabled commands. AutoLISP is an interpreted language and can be used to program AutoCAD (in AutoLISP or Visual LISP mode), or to develop extension commands. VBA VBA is a Microsoft scripting language. It was introduced in AutoCAD 2009 and is based on Visual Basic for Applications (VBA). It is a mixed-mode programming language that can be used for both scripting and programming in AutoCAD. Visual C# Visual C# is 5b5f913d15

Markup is an option for the push and pull editor, for placing annotations or modifications such as comment or dimension in your design. To use it, you must: 1. Set the DIMMPLETE command to the plate you want to mark up, and make sure your zoom is set to details; 2. Set the MODE command to MARKUP; and 3. Select from the Markup menu any of the options available. Markup Assist is an option for the push and pull editor that simplifies this process by allowing you to place the Markup command with one click. To use it, you must: 1. Set the DIMMPLETE command to the plate you want to mark up, and make sure your zoom is set to details; 2. Set the MODE command to MARKUP; and 3. Select from the Markup menu any of the options available. The Markup tool uses a tick or cross to indicate where you want modifications to be made. Set the DIMMPLETE command to the plate you want to mark up, and make sure your zoom is set to details; Set the MODE command to MARKUP; and Select from the Markup menu any of the options available. You can create new polylines with any distance, radius, or line width you need. There's no limit to the number of points that can be created. The polyline can be filled with a gradient color or a solid color. You can use the pop-up tip to create a 2D point, and the 3D LAYER tool to create 3D points. You can move the polyline or edit its points with the MOVE or EDIT commands. This command is not available in the 3D command toolbar. You can use LINEAR, CONICAL, and SPHERICAL to create polylines from a collection of points. You can use the 3D command tool to create 3D polylines.
