Portfolio Sites - Learn Photography Apple Computer saw a future in the electronic creative arts. They wanted a way for artists to create and display their work in a digital format. They were looking for a platform that would work within their Macintosh environment and ultimately, Apple would offer this platform as a piece of software. The company went with Adobe Photoshop because of the reputation of Adobe as a powerhouse in the graphics world. Adobe created a graphic suite to be sold to Apple that would help them meet the needs of their users. The Photoshop suite was released in 1987 and was one of the first graphic suites to combine graphic creation and image editing in one program. It would set the standard for editing techniques and was all about power, both figuratively and literally. The release of Photoshop was a major development in the evolution of computers, with the standardization of image editing being a key component to its success. Prior to the release of Photoshop, the options for editing images were generally limited. Some early image-editing programs were created to cater specifically to the needs of photographers. One example is the Astute Graphics Imaging Program, made by Datametrics. It would eventually be released as 3-D Studio and was found in the range of programs used by some photographers to create 3-D images. Photoshop is extremely versatile and has become the de facto standard in the graphic arts. The program and its accompanying documentation has been the standard since its release; however, the program is not always the best solution. There are several other programs that can do most of what Photoshop does and much, much more. In fact, until recently, even professional photographers would make use of Photoshop's basic tools as their entire toolkit. Q: Add an object to a NSMutableArray of NSDictionary objects I've a NSMutableArray of NSDictionary's. I've added one Dictionary Object to the Array. Now I need to add a new one. And its nested object. And now the new Object should have all the values of the previous object. This is the code I've written:  
NSMutableDictionary \*arr = [[NSMutableDictionary alloc] initWithCapacity:self.arr.count]; // The whole Dictionary Objects for (NSDictionary \*dictionary in self.arr) { DictData \*dictData = [[DictData alloc] init]; dictData.name = [dictionary valueForKey:@"name"]; dictData.contacts = [[dictionary valueForKey:@"contacts"] mutableCopy]; [arr addObject:dictData]; } The code below is the previous entries. The code I tried was wrong. -(void) postData:(NSDictionary \*) json { NSString \*post = [json objectForKey:@"postData"]; NSData \*postData = [post dataUsingEncoding:NSUTF8StringEncoding]; NSString \*postLength = [NSString stringWithFormat:@"%d", [postData length]]; NSMutableURLRequest \*request = [[NSMutableURLRequest alloc] initWithURL:[NSURL URLWithString:@""]; [request setHTTPMethod:@"POST"]; [request setHTTPBody:postData]; [request setValue:@"application/json" forHTTPHeaderField:@"Accept"]; [request setValue:postLength forHTTPHeaderField:@"Content-Length"]; NSURLConnection \*connection = [[NSURLConnection alloc] initWithRequest:request delegate:self]; if (connection) { // Success } else { // Error } } This is the new Object now and the first Dictionary object

Google is starting to roll out changes to its Gmail application and style of operation, or if you will, transformation. Gmail will roll out an updated look and feel throughout its apps. The look will be pretty similar throughout. You can expect it to be similar to Google Maps, where they try to make the app appear just like the real world. If you haven't already taken advantage of the fast inbox, you'll be able to see a revamped interface in a little while. Here's a quick video of the different parts of the new Gmail interface: An interesting feature that Google offers on the new Gmail interface is the ability to store whole emails, including attachments, with Google Drive. There's also a "quick view" option that will pull up either the original email or the attachment that you selected. It's nice to have these options on the app, although I would think that the interface would be a bit easier to use. Here's a short video showing the new Gmail interface: On the left side of the app, there will be many options for sorting and organizing the emails. The option to move emails to the inbox/spam folder can be found to the right side of the screen. If you go into the "Inbox" tab, you'll have options to flag an email as "important" or "unimportant," create a new email, or send it directly from that tab. It should be noted that this new Gmail interface is being rolled out in stages. It was first released in the United States, then in the United Kingdom, and it will hopefully hit every user's inbox soon. FTC: We use income earning auto affiliate links. More. Accelerated extinction has the potential to significantly reduce the time required for fitting hearing-impaired listeners with a hearing aid. In this study, a single-subject design evaluated the use of two methods for determining improvements in the hearing aid performance of a listener with unilateral sensorineural hearing loss, a method using subjective judgments of the feedback magnitude and a method using objective feedback determined using a neurophysiologic measure of the frequency selectivity of the ear, the T-Pattern Determination (TPD). Both methods were
