AfmToPfm is the only application which can create PFM font metrics files. Other applications (such as "FontTools") can only convert ASCII characters into XREF and PFM font metrics. What Is a Type 1 Font? Font developers make fonts available in a variety of formats, including PostScript Type 1 (TYPE 1) and Windows Color Font (CID/TrueType) formats. A font is a collection of information about a specific set of characters. The information includes "coding planes" (the flat paper design, such as the serif, dot and other strokes on which letters are rendered), the measured height and width of the ink strokes used to print the characters, and the size (or font size) at which the font is to be used. A Type 1 font consists of these parts: PostScript font development A font family contains all of the Type 1 fonts (CID/TrueType) in a particular Type 1 format. Encoding A PostScript font encoding scheme assigns one or more PostScript fonts to print a letter on a particular piece of paper at a particular size. One font encoding scheme is required for each paper size that a printed letter is to appear. Encoding Descriptions A particular font encoding is assigned to many fonts because of the variations in the face of some fonts. For example, the euro sign may appear slightly different on different fonts. There are several encoding schemes in the TrueType family. Coding Planes A font is composed of many surfaces (called coding planes) in which a single letter appears. Different letters are formed by variations of the coding planes. Coding planes are defined in relation to specific points on the surface. Coding Plane Descriptions

persisted throughout the summer after Russia's surprise return to the World Cup in 2018, as the opening four matches of the competition failed to live up to expectations. That, however, was entirely to be expected considering the country had just enjoyed two years of "reform," as well as a period of futility under the previous president, Vladimir Putin. Despite Russia's continued protestations that it will never return to the tournament, those continuing concerns are likely to be quelled by its selection as hosts of the next edition of the World Cup in 2028. That news came via a cabinet decree confirming the vote, in which Putin and his allies have full control, although the process was overseen by an independent commission of experts and the foreign minister. A job well done, say the experts

Russia's 2018 World Cup started with a 4-0 win over Saudi Arabia, and ended with a 5-2 victory over Saudi Arabia. Those wins were the only real highlights from the campaign for a team that failed to make it out of the group stage and returned to the eight-year cycle of political upheaval in Russia that began when Vladimir Putin returned to the Kremlin in 2012. A country that had been ranked seventh in the world by FIFA just two years before the tournament was now back in its lowest ranking in 118 years, the year after having been suspended by the association amid allegations of corruption and vote-rigging. Despite the effort to improve the country's international reputation, as well as its infrastructure, Russia's football federation was relegated to the status of "emergency" and temporary relief came in the form of the World Cup. Russia in the last four World Cups is on record as being the third-best performing nation, with five out of 14 points, two of them in the group stage.
