## What's New In?

With the added functionality of Markup Assist, you can create a solid rectangle, circle, or ellipse, and have your AutoCAD application convert the image to a set of paths. This is much quicker than manually converting images into paths, so you don't have to worry about paths or polylines getting mixed up. Also, by importing multiple images at once, you can move and copy data from the existing image to a new drawing file. For more information on importing data into your drawings, including adding custom shapes and objects, check out the Videos tab. (video: 3:25 min.) Paper Space allows you to place a 2D drawing on a 3D paper space, meaning it's possible to view the paper space from different angles than the viewport. You can also zoom and pan through the paper space, and rotate objects to any degree. The added functionality of Paper Space allows you to create new 3D views in your drawings. (video: 2:09 min.) Drawing software to be released on December 21st The Ultimate Drafting software will be available on December 21st. The new software will add CAD-like functionality to Microsoft Paint. You can now resize the canvas and crop the image. You can also add a grid, change the drawing units, and many more features. You'll also be able to drag and drop files and insert text into any part of the image. The software will be available in a 30-day trial version on the 21st. (See details here.) Microsoft Paint now has a new "select mode" for easy image resizing. Select the area that you want to resize, and then click the new small black button that appears on the left of the editing pane. This will resize the selected area. You can also use the new panning and zooming functionality, which allows you to quickly zoom into an image. The ability to resize images is being added to Microsoft Paint as a free update. See new Ribbon tab for quick access to your task panes: When working with AutoCAD, you may find it difficult to quickly access the Tasks pane. To quickly switch to the tasks pane, right-click on the Ribbon, and choose a task pane from the menu that appears. The new task panes will appear by default in the Ribbon. Design Changes
