References External links Category:Computer-aided design software Category:Construction software Category:Electronic engineeringFederal prosecutors have released the text messages between disgraced FBI agent Peter Strzok and his mistress, former FBI lawyer Lisa Page, showing both had strong feelings about Donald Trump. In a court filing on Wednesday, the Justice Department released hundreds of the texts between the two FBI employees, revealing that the embattled agent had been an ardent Trump supporter in the months before the 2016 presidential election. "It is not often you get to keep your job and not go to jail," he wrote Ms Page in July 2016. When Ms Page suggested that the pair get together, the agent replied: "I can't believe you are willing to ruin your life for a potential that might happen." Despite the text messages, prosecutors now say the pair did not collude, and could not prove there was an ongoing conspiracy to manipulate the course of the 2016 presidential election. A jury found the agents guilty last summer of leaking their political views to each other, yet the Justice Department has still yet to explain what they were trying to prove with the texts. Why the Clinton campaign was so eager to discredit the Mueller probe READ MORE On Friday, after the verdicts were handed down, Mr Strzok was fired from the bureau. Following his guilty verdicts, the prosecutors read the contents of his mobile phone to the jury, claiming it was full of derogatory remarks against Mr Trump and members of his campaign. "You are in trouble," Page, who was also found guilty, texted the agent in October 2016. After the agent expressed his fear of going to prison, the pair chatted about how they could ensure that Mr Trump lost the presidential election. "Our three-judge panel will not be dominated by a Republican appointee," they discussed. "That's all I can say about that." In a July 2016 text to Mr Strzok, Ms Page was expressing her disapproval of Mr Trump and her belief that he would win the Republican nomination. "I am riled up," she wrote. "I can't figure out what the hell is the matter with me. I

am beside myself." The Justice Department

Use of selective media to detect Salmonella and other enteric pathogens in calves and its effect on antimicrobial use. To determine the prevalence of Salmonella and other enteric pathogens in diarrheic calves and to evaluate the effect of employing selective media on antimicrobial use and profitability. Blinded cross-sectional study. A total of 524 calves younger than 4 weeks of age. Clinical signs and fecal samples were evaluated, and results were interpreted on the basis of the Diarrhea Scoring and Staging System. Antimicrobial treatments were administered based on a treatment algorithm. Salmonella was isolated from stool samples of 18 (3.4%) calves. Other enteric pathogens, such as Clostridium perfringens, Clostridium difficile, Escherichia coli O157:H7, nonmotile Escherichia coli, non-E coli enteric bacteria, and coccidia, were isolated from 86 (16.4%) calves. Sensitivity of culture-positive enteric bacteria to various antimicrobial agents varied from 76% (Shigella) to 89% (Salmonella). Unnecessary antimicrobial treatments were detected in 14.4% (24) of the sample population. When the 7 pathogen-positive calves that were not treated for reasons of antimicrobial susceptibility testing and cost considerations were excluded, use of selective media resulted in a 3.9% decrease (27) in antimicrobial use. Similar reductions in treatment were also observed for pathogens other than Salmonella. Selective culture of diarrheic calves can be a viable strategy for reducing antimicrobial use. Clinical scoring criteria are easy to use and highly accurate, and can be easily implemented in dairy

practices to aid in case-by-case decisions on antimicrobial treatment of calves with diarrheal disease.Léonce Thibault Léonce
