What's New In AutoCAD?

Markup Assist
automatically keeps a
clean drawing by
correcting or removing
unnecessary objects,
settings, layers, and
objects on top. PDF
preview for markings: By
displaying the PDF

preview next to your document, you can get an immediate preview of what you've marked up. The PDF preview is updated automatically so that you always have the latest markups. Improved undo: When you open an AutoCAD drawing from the menu, the program immediately brings you to the last undo action you've made. When you

are in a document and accidentally make a mark, you can quickly revert to the previous drawing state by going to the last undo action. This makes it easy to undo multiple actions. The undo history can be displayed up to 30 days on screen. (Video: 1:15 min.)

New filtering options for objects: You can now filter AutoCAD objects based on their location, size, and

context. You can filter by the drawing's topic. For example, you can filter for blocks (drawing objects). The object context menu contains options to add objects to the filter. In addition to filtering the objects in the block layer, you can also filter the block layer by its type. For example, you can filter to show only faces or blocks. Widening for text and

objects: Often, the font used in a project has features that you don't need for your drawing. You can change the font to a more compact width by going to "Edit > Preferences > Character Size." This makes it easier to display the text on screen. The new option also affects the font used by the object editor.

Added weight for block

primitives: You can now assign the primitives you create with the block editor to specific objects by assigning a weight to each one. The default weight for most primitives is 50. You can assign weights of 0 (unassigned) to 100 (highest) to indicate the priority of the block primitive. The DesignCenter: The design center is a new place in

AutoCAD to view and manipulate AutoCAD files, which contain all of your drawings, models, blocks, settings, and project files. The design center has a left-click functionality. When you open a project file, you can left-click inside of it to open a new tab or link
