Q: check not equal to different case is true? I am checking if a text box is empty or not. I need to check not only if it is empty or not, but also different cases. Like if it is Empty, is it a small or capital E, and if it is small, is it capital E or not. I am using the following for checking if it is empty.

```
txtE.Text!= String.Empty A: You can use the String.Equals method: string txt = ""; if (String.Equals(txt, String.Empty, StringComparison.CurrentCultureIgnoreCase)) Console.WriteLine("equal"); else Console.WriteLine("not equal"); if (String.Equals(txt, "Empty", StringComparison.CurrentCultureIgnoreCase)) Console.WriteLine("equal"); else Console.WriteLine("not equal");
```

Part of the artistic culture of any city is its graffiti. More than just a visual nuisance, graffiti is an urban art form that, when done correctly, can convey a feeling or message about the city, history or a time period. It's not every day that a college student

What's New in the?

Drawing Management: Automatic detection of new drawings enables you to manage drawings in groups, and keep track of where drawings are located and where in your drawing stack they are located. New drawing management features for iOS, Android and Windows devices.

Graphical User Interface: Present information visually, which makes it easier to organize and process information.

Technical support and training: Autodesk has a dedicated team of designers, artists and technicians to help you use the latest AutoCAD and AutoCAD LT features efficiently and effectively. Autodesk training materials are available at the Autodesk Education website.

Motive: Motive is a new workflow experience for AutoCAD that makes it easier for you to align and position objects. Just choose the points, and a dynamic path is generated to align the objects and create perfectly straight, parallel lines. (video: 1:15 min.)

Motive - Templates: Motive - Templates enables you to generate step-by-step templates of how to position or align objects. Choose a template to launch the process. (video: 1:25 min.)

Infinite Loop: Infinite Loop is a new presentation mode for AutoCAD that focuses on presenting a large drawing in as few lines as possible. Infinite Loop provides a clean and intuitive experience to set up large layouts and other complex drawings. The view retains all information, such as the order and layout of objects. This presentation mode uses real numbers, unlike the built-in presentation modes. Infinite Loop has features that show the last five steps in the drawing.

Infinite Loop - Layers: Infinite Loop - Layers, found in the New Presentation Mode category, enables you to create a new presentation of the objects in the drawing, while retaining the original layers. The view is automatically filtered to show only those objects on the active layer. With this new feature, you can create a new view of the drawing and edit it until you get the results you need.

Overview: An overview feature for AutoCAD and AutoCAD LT enables you to show a graphical representation of the drawing, with objects and linetypes highlighted for each layer and color-coded according to the scale and change type (for example, part or change). (video: 1:10 min.)
