In this article,  
we'll discover  
how to use  
Photoshop CS6's  
new features to  
enhance our old  
images, lay out  
flat images,  
create artwork,

---

and apply various effects and filters to images to get a completely new look. Steps 1. Open Photoshop. Choose Adobe Photoshop CS6 from the Application menu. Alternatively, you can launch Photoshop by double-clicking

---

on the folder icon on your desktop. From the Open dialog box, you can set Photoshop to open the folder of images you wish to work on, choose a particular folder to open, or choose a specific image from a folder. In both

---

cases, choose a folder, then open the folder you wish to work on.

Once Photoshop has opened, you can navigate around and open images that you wish to work on.

Select files by using the following methods: Drag and drop files from

---

Finder, Windows Explorer, and other operating systems to your hard disk. From Photoshop's File menu, choose Open to open the folder containing the image you wish to work on in Photoshop. Choose Open > Image > Open from the menu bar. 2.

---

Load a file. Open a file by using the same methods outlined in the previous section.

You can also choose an image file from your hard drive by pressing Ctrl+N (Windows) or CMD+N (Mac). This opens the file in the Photoshop interface. If

---

you're working with multiple files, you can use the Open dialog box to select the images you wish to work on and then use the File menu, from the menu bar, to load the files. To see other files in the folder, use the Folder menu.

---

3. Place a new document. To start, you'll create a new document. You can then start a new layer in the layer palette, by choosing Window > Layers. If you wish to create a new layer without first opening the layer palette, choose Layer >

---

New > Layer. This will produce a new layer and place it over your existing layers. You can also start a new document at any time by choosing File > New. The New dialog box appears. Choose Photoshop Document from the Size list at the

---

top of the New dialog box. The New dialog box should now contain a single, large white canvas with no layers. 4. Create a new layer.

Best Free  
Photoshop  
Alternatives If  
you are looking  
for a photo  
editing software,  
I highly  
recommend you  
download Pixlr.  
Pixlr is a cloud-  
based image  
editor with free  
apps for Android,  
iPhone, iPad and  
web. Pixlr allows

---

you to edit and  
resize images and  
add effects with  
a great amount of  
flexibility. You  
can create fun  
and colorful  
images that you  
can share using  
social media. You  
can also download  
the mobile apps  
for iOS and  
Android. Pixlr  
supports most

---

major image  
formats and  
allows you to  
edit your photos  
and drawings with  
ease. One of my  
favorite features  
of Pixlr is that  
it doesn't reduce  
the quality of  
your photos.  
Unlike Adobe  
Photoshop, Pixlr  
doesn't impose  
any quality

---

restriction on  
the photos you  
edit, which means  
that you can go  
wild with your  
editing. Best

Another great  
free alternative  
is Snap. Like

---

Pixlr, Snap is a cloud-based photo editor. Unlike Pixlr, however, Snap supports very few image formats. For example, I couldn't edit any of the images I've seen with Snap. Other than that, Snap is a great editor for editing images.

---

One of the main features of Snap is that you can also add new color and effects to your images. Like Pixlr, Snap supports the latest Retina display on Apple devices. Read also: Best Affiliate Program | Free 7-Day Trial Best

Like Pixlr, Snap  
supports most  
popular image  
formats. Both of  
these editors  
also allow you to  
edit images on  
your mobile

however, since it has a simpler user interface. I also like the fact that you can install Snap on your mobile devices. If you are a photo editor, I would recommend using these three tools. Pixlr

Using ListView As  
a Particle System  
I have been  
looking at  
particle systems  
for a long time,  
and I have yet to

---

find any way to make a particle system which occupies a ListView control. Most of the particle systems (such as this one) are a few scrollbars across, and don't really look as 'perfect' as they would in a ListView. Is

---

there a way to have a particle system "inside" of a ListView? What are your suggestions? A: Maybe a custom control is what you're looking for (though I'm wondering why it would be any different than getting a listview item to

---

act as a listbox item). You could then create a custom control that will always look the same - the outer frame of your control will be the same, you can set the background to a solid color, and if you use rendering states you can hide
