1) The Summoning process The setting of the game takes place in the Lands Between. It is a multilayered world full of adventure. The Lands Between is a world of fantasy. It is not a precise world of history or geography. It is a world where the past, present and future collide, where memories are kept without forgetting, and the concept of time does not exist. The Lands Between is an enormous world of fantastic lands, where it appears as if time has stood still. In order to maintain this illusion, it has the characteristics of a cohesive world where you can directly travel throughout all of the lands, apart from the linear progression that exists in the realm of time. A wide world of fantasy and adventure, the Lands Between is a world full of excitement. In order to stimulate the senses, there are many kinds of monsters, battles, relics, and of course... Locations. There are a variety of locations that the player can explore and fight monsters, which are divided into the kind of atmosphere that they give off. "Windy Forest": A place of mystery. All of the sound of the wind around and tall trees and canyons of the Lands Between resemble a large cathedral. "Highland": A sun-drenched place. People may feel calmer here. "City": An enlightened and monotonous area. Here you will find broad, modern cities in which it may seem like time has stood still. "Deep Sea": A place full of silence and beauty. A place where you may feel extreme fear or awe. "Depth": An icy and cold place. A place where the past and the future disappear.

2) A Light Fantasy and Action RPG The Lands Between has a large world, and the story told in the game is composed of various stories. The story is told in a fragmented form, while the various thoughts of the characters are bound to intersect, so the pacing of the game is different from a conventional action RPG. When you kill monsters, the points, skill points and various other statuses that appear will also increase or decrease. However, once

The effect of gap size on the angle of impingement of dentin blocks on the enamel block: a scanning electron microscopic study. Studies of the in vitro impaction of dentin discs on enamel discs showed that the majority of dentin blocks, after penetration and impaction on the enamel surface, crossed the enamel surface across an angle of 45 degrees. As this angle became appreciably larger, the dentin block penetrated and impaled on the enamel surface at more than one point. The purpose of this study was to determine if this same phenomenon occurred with the dentin block/root dentin interface and impact on the cementum surface of the root.
