Are you ready?Heavy rain floods parts of Atura and Roraima in the Amazonas region. (Reproduction) About 4,000 kilometers (2,485 miles) in length, the Amazon is the largest tropical river in the world. It is a major source of fresh water, fishing resources, and the lifeblood of the rainforests where it begins. At almost 14,000 square kilometers (5,453 square miles), the Amazon region, according to demographer Danny Ruiz of the UN Population Division, is the world's second-most densely populated area and is larger than several countries. The Amazon is also the world's most extensive and most bio-diverse tropical rainforest. It also has the largest and longest mangrove fringe, one of the largest and most hydrologically connected floodplains, the greatest area of freshwater wetlands, and the most important sedimentary floodplain with huge rock exposures, deep underground aquifers, and rich buried forests and microfauna. The Amazon also, according to its own vegetation, is home to about 40,000 plant species, 200 fish species, and 7,000 bird species, as well as an astonishing number of mammal, reptile, amphibian, and insect species. The Indians Called it Home Most people today have little or no idea that the mighty Amazon once lay entirely within Brazil, or that it was much larger than it is today. The name Amazon comes from the word "amareka," which the Guaranians or the natives of the Amazon called the river that ran through their territory. The word has a similar root to the word Amazone, the name the Guaranians gave to the female deity who protected them. Map showing the current extent of the Amazon biome. (Information courtesy of the World Wildlife Fund) The Amazon was created after the last ice age, when the ice melted into the ocean and changed the level of the world's oceans and seas. The Amazon River was created when the melted ice ceased to flow away and caused the seas to rise. Its waters spilled out into a series of lakes that gradually fell back to the sea. The lower Amazon River, or the amazonia, as the surface region is called, was created when the Amazon River left the lake and filled the flat areas of the earth. The Amazon began as a freshwater stream or "chocoeiro
