FIFA® 22 is full of innovation to bring its authentic football experience to life. To match the intensity of the complete game, it now features "HyperMotion Technology", the most advanced sense of movement ever seen in a video game. Using motion capture data collected from 22 real-life players playing a complete, high-intensity football match in motion capture suits, FIFA 22 brings players into the moment with one-of-a-kind, full-body gameplay; creating a true sense of movement and speed from head to toe. This technology allows FIFA 22 to render the player as they really move across the pitch, providing accuracy in all facets. The vivid, clean presentation, coupled with this authentic performance, provides a remarkably interactive experience for fans and players alike. "FIFA® 22 is a fresh and innovative football experience," said Will Smith, Executive Producer, EA SPORTS™ FIFA. "We pride ourselves in celebrating football's diversity with bold new features, from a new creator in the U.S., to new ways to play, and unprecedented customisation options. Playing the game is no longer just about moving a character on a field; we've worked closely with professional athletes, clubs and leagues to deliver the most authentic movement of a football player ever seen in a video game." New Horizon Mode EA SPORTS™ FIFA 22 includes a new way to play in "Horizon Mode," a first for FIFA. With the addition of Horizon Mode, FIFA 22 allows for a fully immersive football experience that lets players tackle, pass and shoot a football like never before. Players can be deployed to eight new zones, each representing different areas in and around the field, to take control of the soccer scene. These zones allow for each player to have different skills, weapons and attributes with unique abilities - while providing plenty of opportunities to make a difference in your own league. This mode opens up new game modes, gives access to new free player progression, and is the ideal mode for competitive play or training. Horizon Mode continues to support netcode and physics, so players can enjoy more localised touch-based gameplay and less glitches. Crowd Boost The crowd in FIFA 22 plays a bigger part in the match-day experience. FIFA 22 also introduces features that improve the behaviour of fans on the pitch, increasing the atmosphere created at matches - so you'll feel even more engaged in the action. On top of this,

FIFA, short for Forza Italia Football Associations, is an association football video game series developed by EA Canada and published by EA Sports. It was released in September 25, 1989 for the Atari XE2, the Atari Lynx, the Nintendo Entertainment System (NES), the Sega Master System, and the Sega Genesis. The series quickly became one of the most popular console football franchises with multiple games released in the series, including FIFA, FIFA 99, FIFA 2000, FIFA 99, FIFA Street, FIFA Street 2, FIFA Street 3, FIFA Street 4, FIFA Street series, FIFA 06, FIFA 07, FIFA 10, and FIFA 11. Gameplay FIFA is a football video game where players use physical attributes such as speed, strength, and stamina to control a ball by kicking, sliding or passing the ball. There are two styles of gameplay modes: Simulation and Arcade. Simulation mode, introduced with FIFA 99, is a simulation mode that allows players to control a team. Players are able to create and customize a player through a character creator, along with settings such as skin colour, and then sign him/her up for a team. After creating a player, the user is able to play solo, with up to three other players on the same console, or a community, which is more realistic. Arcade mode, introduced with FIFA 2000, is a shooter-style mode where the players compete against the computer-controlled opposition. The core gameplay, tackling, and collisions are accurate, while the handling is arcade-style. Players are able to score in FIFA by striking the ball with their boots. Goals can be scored either by dribbling the ball past the opponent into the goal, or hitting the ball with a cross. Gameplay can be enhanced through the use of player equipment, such as goal-line technology, which can be acquired through the use of coins and/or goals scored with a player-provided goal. Player skills (such as dribbling, shooting, or passing) are not controlled by the player through this equipment, as they are controlled by the player's skill rating. Notably, the distinctive over-run scoring system was first featured in the early versions of FIFA, but was removed later in the series. FIFA is the fourth gaming series to be published by EA Sports, the first being FIFA Soccer (which was followed by EA Sports Football). The predecessor to EA Sports FIFA series is Electronic Arts' EA Sports games; the bc9d6d6daa
