Gujarati..Q: Get data attribute value in angular 4 I am newbie in angular 2/4 and stuck on this one. I need to get data attributes value, How can I achieve it? Here is what I need to accomplish : I am using data- attribute along with *ngIf and I need to get the value of these data attributes. Can you please help me? A: If you mean retrieving the values of the attributes like data-description, data-images then that can be achieved in a similar way, using a custom directive. Let's say you have the following: Then create a custom directive which you will name {AttributeDirective} or whatever you like. Now this directive can just call the native getAttribute() method to retrieve the attribute value: export class {AttributeDirective} { @Input() name: string; constructor() { } @Input() value: string; ngOnInit() { this.value; } getAttribute(): string { return this.name + '=' + this.value; } } You can then use it in a similar way to how you would use a normal HTML element directive: When you use this directive you need to also change the way your HTML is defined to include the directive attribute: ![(BM 0cc13bf012
