Media Finder for iTunes is a very useful and efficient application that can search for compatible files on the selected computer for better exposure on the iTunes music library. The tool has an intuitive interface that provides users with a very straightforward and intuitive operation which allows them to easily browse through their computer's folders and subfolders in order to preview and then choose the files they wish to add to iTunes. Subsequently, with just a few clicks you can decide which files are successfully added and then launch iTunes to finally include them all in your collection. Furthermore, if the chosen files happen to contain some audio or video sequence, you can preview them before adding them to your iTunes library. Media Finder for iTunes guarantees that every file that you select is added to iTunes in its original version, i.e. the one that was originally saved and not the one that was extracted, for example MP3 or AIFF, as the program ignores the audio or the file format and detects the original. In addition, the application offers a host of other features like sorting, previewing, renaming and the removal of duplicates. Furthermore, the program supports most of the most popular audio and video formats, such as M4A, MP3, AAC, OGG, AIFF, M4B, WMA, WAV, MP2, MP4, MOV, and QT. Moreover, Media Finder for iTunes permits you to easily include video files or separate audio and video clips in a single file and you can synchronize audio and video files together easily, adjusting the volume and video length to your liking. In conclusion, Media Finder for iTunes is a very useful application that makes it easy to import and export audio and video files from and to iTunes in order to update your library.
