These are only some examples, but you can browse through the long list of available articles in the MetaTrader 5 Documentation A ChatBot is a computer program that is designed to perform a specific task or a number of tasks, such as the ability to do a conversation, taking part in a text message conversation, or answering questions posed in an e-mail or chat. The conversation with the user is similar to a human conversation. This is the most common example of a Chatbot. However, the term can refer to many types of software. Chatbots can use artificial intelligence and natural language processing to carry on real-time messaging with users via text or e-mail. These algorithms and data tend to be used in the development of search engines. Chatbots are most commonly used in the online dating industry, but have also found use in the customer service or support industry. Since chatbots can handle lots of messaging in a short time, they can be used to answer quickly. Moreover, this feature of the chatbot can help building good customer relations and can build a good reputation for the company (or website). Some of the chatbot use cases are: Product and support chatbot The chatbot would answer questions such as the location of your nearest supermarket. What's New In?

MetaTrader is a professional software application that offers trading terminal services in several financial markets (Forex, CFD, Futures, as well as equity markets) and stock exchanges for brokers. You can receive quotes and news in real time, view price charts of financial securities in different timeframes, perform trade operations, manage open positions and pending orders, test trading strategies, generate detailed reports, and write Expert Advisors, custom indicators, scripts and functions in MetaQuotes Language 5. There's also support for an automatic trading system which can analyze Forex quotes and stock quotes, and execute trade operations. Demo/live accounts The program gives you the possibility to work with two types of accounts, namely demo and live. The demo ones can be used by beginners to test trading strategies but without working with real money and transactions. They provide the same functionality as the live ones. A wizard-like approach helps you give information about a real or existing account (e.g. name, country, state, city, phone number, email). Authorization options allow you to get access to the trade account. Security features are implemented for making sure your information remains private, namely data encryption with 128-bit keys, extended authorization, verification of server authenticity, protection of configuration files, as well as password protection. User interface The GUI looks a bit overwhelming at a first glance because it comes packed with an impressive number of trading tools so you need to dedicate some of your time in order to understand how it works. A help manual is available in case you need further assistance with the configuration settings. A built-in Navigator is integrated in the main window for helping you access various features of the terminal, namely Accounts, Indicators, Custom Indicators, Expert Advisors and Scripts. Trading utilities MetaTrader helps you open multiple charts for the preferred symbol in the main panel, save the history data of the current chart to CSV, PRN or HTML file format, and print or export charts to PNG files. The application comes packed with several types of indicators (e.g. technical or custom ones, built-in

examples with source code, indicators purchased from the Market) for analyzing the price of dynamics. What's more, you are allowed to transfer money between accounts within the same trader server, view the status of open positions and pending orders (and manage all trading activities), check out a summary with the state of assets by all open positions, and access a
