Glu Mobile has announced that "the Unity Team, along with Ubuntu team Community Contributions Initiative, is introducing Sound Engineering Library (SEL), an open-source library to provide APIs for application development with more powerful sound effects."

THERE ARE TWO WAYS TO USE SEL. In the first method, an app developer can choose to import the library. SEL handles all sound related system calls and provides direct access to all sound APIs whether they are hardware based or software API calls. In addition to providing open-source advantage to the audio development with higher quality of sound, it's all supported by guaranteed compatibility of API calls.

The second approach is that SEL can provide sound effects system-wide by exposing it as an optional module. Supported by the existing Audio Mixer API, the Unity team is deciding to call this standard method.

SEL comes with a variety of powerful sound effects, such as meatball, drum, swirling wind, etc. which are all highly appreciated by game developers and artists. With SEL, developers are enabled to access millions of sounds from all available APIs.
