Q: How to check what is the best file format for the fixed console output? (C/C++ statements) I'm making a program that gets the current time to give it to the user and wrote the time of this program as a display. My goal is to check what the best file format is of getting the biggest amount of lines into 1 file. I'm using Visual Studio 2013. Is there a way for me to make it so that it has a big line count, for instance about 1000, and has many different formats of writing that? I want to use the following code but I am not sure how to implement this using the fstream. `char name[] = "E:\\fileGOT"; ofstream myfile (name); ifstream myfileIn("E:\\fileGOT"); ofstream myfile ("E:\\fileGOT"); myfile.open(NAME, ios_base`
