The workshop will be held on November 2 and 3, 2017 at the University of Missouri. This workshop is an annual event, held in late

Fall. The specific purpose of this workshop is to connect clinical (blood bank technologists, medical technologists, scientists, physicians, pathologists, and clinical laboratory scientists) to high throughput single nucleotide polymorphism data (SNPs and microsatellites), and to explore the potential of technology for the care and treatment of human subjects. The workshop will also include some examples of actual data collected in different studies that show how SNPs and microsatellites can be used effectively. Participation in the workshop is open to clinical laboratory scientists, medical and blood bank technologists, scientists, physicians, pathologists, and high throughput genomics professionals. It is also open to research professionals from any and all fields. Workshop presenters are obligated to be at the workshop, and attendees are obligated to attend the entire workshop. Rationale: SNP's and their associated microsatellites are valuable in the following ways: 1. Helps guide physicians in clinical decision making based on genetic testing (e.g. identifying mutations in a gene causing a disease and/or their association with blood coagulation) 2. Helps identify subjects with a

disease and make informed decisions regarding treatment 3. Provides information for counseling patients 4. Helps identify suspects or parents of an affected child 5. Provides information for prenatal screening 6. Helps identify paternity or other types of kinship 7. Provides information about determining whether a couple is at risk for disease transmission 8. Helps identify carriers of a recessive disease 9. Helps identify subjects for research 10. Helps identify subjects for medication and drug testing 11. Helps identify subjects for biosamples collection 12. Provides information for genetic banking 13. Provides information for family planning 14. Provides information for genetic counseling 15. Provides information for in vitro fertilization 16. Provides information for in vitro germline stem cell replacement. Attendance at the workshop is free of charge. If you have any questions regarding this workshop or wish to register, please contact: . If you are interested in helping organize a session at the workshop, please contact D.J. Are we there yet (123-456-7890). Tea leaves are processed to produce a leaf extract (hydro-alcoholic solution) from which Catechin is separated by precipitation with

bicarbonate of soda. Catechin is then extracted using organic solvents; lastly, C 0cc13bf012
