Does anyone know the best library or tool to open and view the following image formats? JPEG, PNG, GIF, BMP, TIFF. I've had only luck using freeware Paint and Paint.NET to view these images. I've had little luck getting these to work on Mac or Windows, JPEG PNG GIF BMP TIFF Any help on viewing these formats would be greatly appreciated. A: You can use the ImageMagick CLI tool. Instructions are here. Medication safety issues in everyday primary care: focusing on the patient-physician relationship. Medication safety in the real-world setting of primary care practice is fraught with challenges. An emphasis on quality of care for patients of all ages and a wide range of health conditions requires that primary care clinicians maintain patient-centered communication with patients and families. This issue of Primary Care provides an overview of what is needed by primary care physicians to maximize medication safety and how they can achieve it in day-to-day practice.Q: How to wrap text around circle? We are trying to create a circle with a text inside in CSS. The issue is that we want the text to wrap around the circle. Is there any way to do this in CSS? 2 A: I'm not sure if I understood what you want but maybe you will like this one, I just make a quote to create a white background and wrap around the circle. .circle background: white; -webkit-border-radius: 50%; -moz-border-radius: 50%; border-radius: 50%; b

My android camera application does not work on my Samsung s5 and s6. No image is seen on the application. When I run it on an emulator it works fine. How can I make it work on the s5/6? Do I need to update the sdk? How can I run the application on Samsung devices? A: I've heard that many people have problems with the default camera app. Maybe try another one? Another link with more information. James Lovelock: The Scientist We Need A diamond, surprisingly for a scientist. The painter, unusually for a scientist. The poet, surprisingly for a scientist. The climate scientist, surprisingly for a scientist. This year in 1953 a 25-year-old scientist at the University of New Mexico, Dr. James Lovelock, considered a "surprising" scientist for the obvious reasons stated above, co-discovered the first identifiable iteration of the thermonuclear theory of the planet's origin. This theory is the basis of the theory of the origin of life on Earth. In the early 1950s, nuclear fission theory, and as a result of that theory, the nuclear fission bomb, were the only two ideas in existence that promised the possibility of a human extinction event. Some 40 years later, nuclear fusion theory, the process by which the Sun is powered, became the only known means of meeting the possibility of human extinction. The thermonuclear theory of planetary origin, while it theoretically recognizes the possibility of human extinction, has led to the discovery and implementation of life on other planets. What? Life on other planets? Yes, and the global warming of this planet is some of the main evidence that the planet is indeed alive, at least in the manner that the thermonuclear theory of planetary origin understands life. Human beings evolved as a consequence of the evolution of the planet, and in turn the evolution of the planet has been caused by the evolution of human beings. Dr. Lovelock's theory of planet's origin is easily understood by anyone who even grasps the first rudiments of chemistry or even physics. In his own words the theory is: "the birth of the earth and solar system from a cloud of interstellar gas. The gaseous nebula condenses, first into a solar nebula. The nebula becomes dense enough for gravity to overcome the electromagnetic forces holding it together. At that stage
