How many Layers is there in AutoCAD? Starting from AutoCAD 2019, the layers are separated from one another in the drawing. What is AutoCAD & What are its functionalities? AutoCAD is a CAD Software used for Computer Aided Designing and Drawing. It is used for all type of technical drawings such as house plans, Architecture, Elevation, Engineering, Structures, Floor Plans, etc. It is developed and marketed by Autodesk. What are the different types of AutoCAD available? There are two major types of AutoCAD i.e. AutoCAD R14 and AutoCAD R19. R19 contains a lot more features than the R14. These features include additional object types, more advanced features, and more advanced tools. The 2017 and later R19 version of AutoCAD contains features from AutoCAD 2D 2018 release, which will be referred to as R19 (R19). Major Features Of AutoCAD

1. Interactive Block Modeling The block-based model of CAD allows the blocks to be created quickly and easily, while at the same time providing a great deal of flexibility and power to the designer.
2. Manage and combine properties AutoCAD allows you to specify properties of objects and blocks, which are combined with other objects or blocks for a variety of effects.
3. Take advantage of the Automatic datum conversion AutoCAD automatically performs datum conversions to allow you to work at different levels of precision and accuracy.
4. Create new drawing styles AutoCAD allows you to use an existing drawing style to create new ones to suit your specific requirements.

CARACAS, VENEZUELA - Caracas, Venezuela - The office of Venezuela's most influential court official has been commandeered by the president's opponents in a partial power grab from the opposition-controlled national assembly. A ruling by Supreme Tribunal Justice Maikel Moreno on Thursday deemed the decision of the national assembly to give itself legislative power unconstitutional and ordered a re-vote. The ruling dealt a blow to President Nicolas Maduro and cast a cloud over the country's future, with economic turmoil and nationwide protests intensifying. The decision by the Supreme Court's 10-member Electoral Chamber empowered the national assembly

to hold a new vote for lawmakers, but the court also granted itself the power to rule on cases involving the national assembly. A special meeting of the National Electoral Council was scheduled for Friday to deal with the issue, a council member told AFP. The council's secretary general, Tibusay Lucena, said she was unaware of the ruling. Opinion polls indicate a small majority of Venezuelans approve of the president and have faith in his promise to change the economic model of the oil-rich but cash-strapped country. The Supreme Court's move is the latest attempt by Maduro's opponents to unseat him by taking the country's courts and institutions under their control. The Supreme Court's ruling came just days after opposition politicians seized control of the country's legislature. The opposition-led congress convened on Wednesday for the first time since winning control. The opposition is trying to weaken the government's grip on power by gaining control of state institutions, Maduro has warned. "They want to set up a system of totalitarianism."

A: The main differences: you can pull the data from most databases that support ODBC (including MS Access) you can use MS Access as your source of data you can execute reports via command line and from your web application. you can execute most queries against an mdx source (not the same as a regular query) Q: What is the PHP way to throw an error message In ColdFusion, if I want to throw an error, I do this: In PHP, if I wanted to throw an error, I would do this: However, I don't see any option to do the same in PHP. How should I throw an error in PHP? A: Catchable fatal error, unless there's something between the method and the error to catch it.
