It includes many features, so there is a lot of room for improvement. The program is usually as easy to install as any other application, but requires some setting of preferences. After installing the program you will be prompted to setup a "default PDF reader" that will be used when opening a document, and the program will ask you about the 'commands' that you want to have available in this PDF reader. Because the default PDF reader is not 'smart' enough, a "learning mode" is available. This mode lets you choose the actions of the various commands. The program doesn't offer the possibility of searching for documents by date or keywords. This is a limitation that should be removed in a future version of the software. In addition, the program doesn't have a "Create PDF file" option (for some reason it is only available for the Print command). The program allows you to select all the text on the page and to convert it to a list, including the hyperlinks. Unlike a lot of other programs, Perfect PDF Reader does not have a browser, but it does include a built in viewer. The program supports many extensions
