Open the program and create a project. Open the "File" tab and navigate to the "Open" group. In the "Open" group you find "Generate model from file or URL". Select "Autocad lite 3" and give it a name. Save the file and open it. Open the "Modeling" tab and choose "Zoom to fit" from the "Misc" group. On the 3D Model, scroll with the wheel of the mouse in a circle in order to make the model bigger. You find the Z-axis automatically on the 3D model. Save the 3D model to an online service like Google Drive. If you like, you can save a local copy of the model as well. Open the "Editor" tab and choose "Open Document" from the "Scene" group. The 3D model is displayed there. If the model isn't displayed, you have to choose "Organize models" from the "File" tab. Then choose the file with the name "autocad.mbm". Click "open" on the right side. There is an icon on the right side of the screen. If you have the modeller's licence, you can use the licence key and save your own licence key. If you haven't the modeller's licence, you can use the exe file. Go to the "File" tab and navigate to "Save as". Choose "As a model" and save the file as autocad.mbm. Now you can use the autocad.mbm file on your Mac and Windows. If you want to make the model bigger, make the circle more, if you want the model to be smaller, go to the opposite direction.
